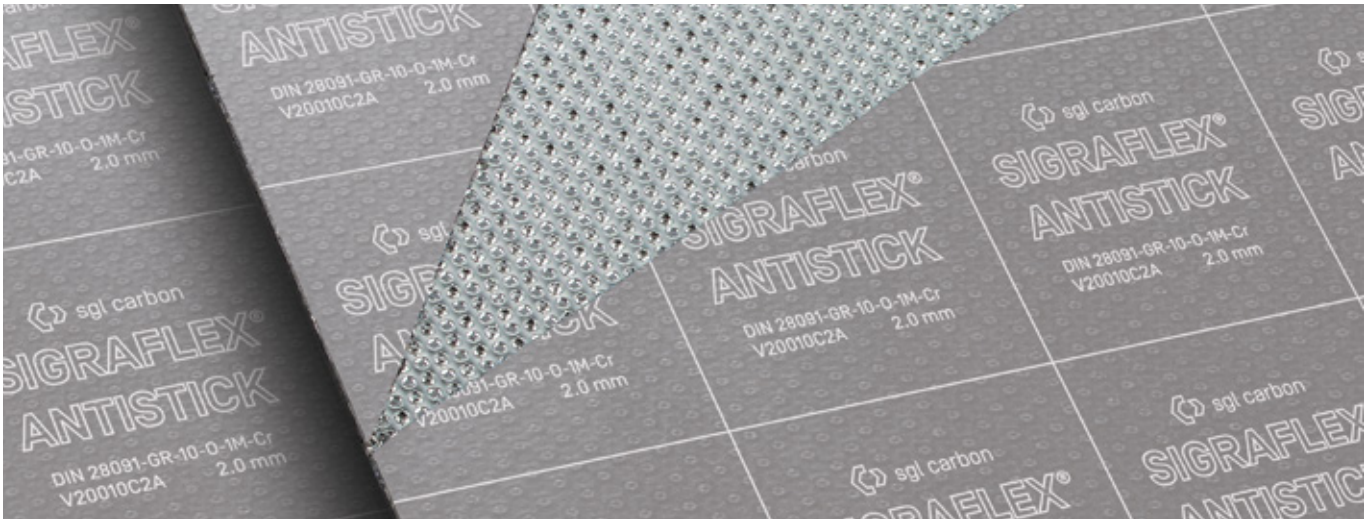
SIGRAFLEX® ANTISTICK

Sealing sheet made from natural graphite with tanged stainless steel reinforcement and mineral antistick finish



SIGRAFLEX ANTISTICK is an asbestos-free flexible graphite sealing sheet with a 0.1 mm thick tanged stainless steel reinforcement. The sealing sheet is coated with a special mineralbased antistick finish to improve handling.

It has been adjusted to give optimum antistick behaviour as to avoid adhesion to the sealing faces and to keep the leakage rate as low as possible.

Applications

- For partially inaccessible sealed joints, as the antistick effect facilitates disassembly
- For all common pipework and vessel flange designs
- For operating pressures up to 100 bar
- For corrosive media
- Operating temperatures range from –269 °C up to 550 °C depending on chemical resistance. Life time might be limited at high temperatures. Consult the manufacturer when application temperatures exceed 450 °C. Please refer to our technical guideline regarding thermal stability.
- Gaskets for the chemical, petrochemical and refinery industries
- Steam pipework in power generation plants and heating equipment
- Existing plants

Properties

- No adhesion to sealing faces, even at high temperatures
- High operational reliability, increased plant availability
- Excellent oxidation resistance
- High blow-out resistance and mechanical strength
- High fault tolerance during assembly and operation
- Good chemical resistance
- Long-term stability of compressibility and recovery, even under fluctuating temperatures
- No measurable cold or warm flow characteristics up to the maximum permissible gasket stress
- No aging or embrittlement (no adhesives or binders)
- Asbestos-free (no associated health risks)

Assembly instructions

Our detailed assembly instructions are available on request.

Material data of SIGRAFLEX® ANTISTICK

Typical properties		Units	V16013C2A	V20010C2A	V30010C2A
Thickness		mm	1.6	2.0	3.0
Dimensions		m	1.0 x 1.0	1.0 x 1.0	1.0 x 1.0
Bulk density of graphite		g/cm³	1.3	1.0	1.0
Ash content of graphite (DIN 51903)		%	≤ 2.0	≤ 2.0	≤ 2.0
Purity		%	≥ 98	≥ 98	≥ 98
Total chloride content		ppm	≤ 25	≤ 25	≤ 25
Total halogen content (Cl, F, B, I)		ppm	≤ 100	≤ 100	≤ 100
Total sulphur content		ppm	< 300	< 300	< 300
Oxidation rate in air at 670 °C (TGA)		%/h	< 4	< 4	< 4
Oxidation inhibitor			yes	yes	yes
Passive corrosion inhibitor (ASTM F 2168-13)			yes	yes	yes
Reinforcing steel sheet details				Tanged stainless steel sheet	
	ASTM material number		316L	316L	316L
	Thickness	mm	0.1	0.1	0.1
	Number of sheets		1	1	1
Residual stress (DIN 52913)	$\sigma_{D\ 16\ h,\ 300\,°C,\ 50\ N/mm^2}$	N/mm²	≥ 45	≥ 45	≥ 45
Gasket factors (DIN E 2505 / DIN 28090-1)					
Gasket width	b_D = 20 mm σ_{VU}	N/mm²	20	20	20
	m		1.5	1.3	1.3
	σ_{V0}	N/mm²	160	160	120
	$\sigma_{B0\ at\ 300\,°C}$	N/mm²	120	120	100
Compression factors (DIN 28090-2)					
Compressibility	ε_{KSW}	%	20	40	40
Recovery at 20 °C	ε_{KRW}	%	4	4	4
Hot creep	ε_{WSW}	%	< 4	< 4	< 4
Recovery at 300 °C	ε_{WRW}	%	4	4	4
Young´s modulus at 20 N/mm² (DIN 28090-1)		N/mm²	850	850	850
ASTM	„m“-factor		2.5	2.5	2.5
	„y“-factor	psi	3000	3000	3000
Compressibility (ASTM F36)		%	20	40	40
Recovery (ASTM F36)		%	20	12	12
The gasket factor conversion formulas as per AD Merkblatt B7 are as follows				$k_0 \times K_D = \sigma_{VU} \times b_D$ $k_1 = m \times b_D$	

Definitions

σ_{VU}	Minimum gasket assembly stress. Recommended gasket assembly stress: ≥ 20 N/mm² bis σ_{B0}
σ_{BU}	Minimum gasket assembly stress in service, where σ_{BU} is the product of internal pressure p_i and gasket factor m for test and in service ($\sigma_{BU} = p_i \times m$)
σ_{V0}	Maximum permissible gasket stress at 20 °C
$\sigma_{B0\ at\ 300\,°C}$	Maximum permissible gasket stress in service
m	$m = \sigma_{BU}/p_i$
„m“-factor	Similar to m, but defined acc. to ASTM, hence different value
„y“-factor	Minimum gasket stress in psi
k_0	in mm, factor for gasket assembly stress
k_1	in mm, factor for gasket stress in service
K_D	in N/mm², max. gasket stress-bearing capacity under assembly conditions

ε_{KSW}	Compression set under a gasket stress of 35 N/mm²
ε_{KRW}	Gasket recovery after reduction in gasket stress from 35 N/mm² to 1 N/mm²
ε_{WSW}	Gasket creep compression under a gasket stress of 50 N/mm² at 300 °C after 16 h
ε_{WRW}	Recovery after reduction in gasket stress from 50 N/mm² to 1 N/mm²

The percentage changes in thickness of ε_{KSW}, ε_{KRW}, ε_{WSW} und ε_{WRW} are relative to the initial thickness.

Unless stated otherwise, all values are valid at room temperature, typical, non-binding and subject to change. Please note some values correspond to the graphite foil only. For engineering or design purposes please contact our technical sales team.
